## About R-LED:

Ratisbona-LED was founded in 2006 by an Ex Osram Opto employee in Regensburg (celtic: Ratisbona), South-Germany.

The target was to develop high quality LED products especially for cars and specific models.

In 2007 R-LED developed their own "Check-IC" which disabled the error message by Astra H.

In 2009 R-LED developed the innovative "Check+" to avoid the error message by the "Full Can-Bus Generation" Opel/Vuaxhall cars like Astra J, Insignia and Ampera.

Only with engineering direct at the car it is possible to make high quality LED products which look perfect, easy to mounting and work without error signal.

R-LED use only the best LEDs from market leader like Osram OS, Samsung or Epi Star.

R-LED is not an ebay/china reseller who sold cheap china LED products. Our products were 100% engineered in Germany. The final product step and quality management were also there.

You can be certain of this: All products for a car model were complex tested on that car and work perfect on it. No error code or short circuit. New products were only released when they accomplish our high claim and are easy and save to fit.

## Insignia LED numberplate light

Thanks to high quality components and OEM GM case we guarantee no water ingress or grid.

You get two OEM GM/Opel blade cases where the LEDs and Check+ already build in. You must just change the complete case.

Also perfekt for leasing cars

Our solution with R-LED Check+ brings 100% no error message by Insignia.
